BETH Industrial Electrostatic Precipitator

BETH® Industrial Electrostatic Precipitator

For de-dusting large amounts of gas, R&R BETH Filtration offers industry-electric filters.

In this magnitude the electric filters are planned / projected especially for the respective process conditions.

R&R BETH® industry-electric filters are always individually designed for each project and tailored to the customers' demands.

- **Resistant**
- **Low-maintenance**
- **Energy-efficient**
- **Built for gas temperatures up to about 420°C**

Through the usage of fewer and slower turning plant components, maintenance is limited to once a year. In contrast to filtering precipitators, the BETH® industry-electric filter has very low energy costs.
