BETH Oil-Mist Electrostatic Precipitator

BETH® Oil-Mist Electrostatic Precipitator Filters have a similar structure as the wet-electric filters.

It is mostly carried without any rinse and fog water zone.

Suitable for air volume flows from 15,000 m^3/h to 200,000 m^3/h.

If necessary including CO2-fire extinguishing system, fire damper, pipeline and fan.

Due to the low-maintenance operation it is a cheap alternative to decentralized filter systems.
